

ZAIN ALI

FRONTEND DEVELOPER

About Me

Hello! I'm (Zain Ali), a passionate Web Developer with over Two years of hands-on experience, specializing in WordPress, React, and Core PHP. I focus on building smooth, high-performing websites and custom systems that deliver real value to clients.

I have developed multiple WordPress projects, including professional work at WSM Solutions, where I handled custom themes, plugin configurations, performance optimization, and complete website builds. Alongside WordPress, I have strong experience in React—developing my own modern, responsive portfolio and working with component-based architectures to create clean and interactive front-end experiences.

On the backend side, I have built several management systems using Core PHP, such as user management, inventory systems, and custom admin dashboards. These projects strengthened my understanding of backend logic, databases, and secure, scalable application structures.

Work Experience

Mar 2025 – Present
